

Google Gemini Research: AI Visibility & GEO Framework

Source: <https://share.gemini.google/WIKDgMGnPTVL> | Extracted & Prepared: July 30, 2026

1. Core Research Findings & Empirical Frameworks

- **The RAG Shift:** Generative search marks a fundamental transition from keyword-based indexing to semantic retrieval via Retrieval-Augmented Generation (RAG).
- **The Prompt Engineering Fallacy:** On-page prompts cannot dictate LLM outputs. AI discoverability requires technical crawlability, structured machine-readable entities, and external third-party citations.

Empirical GEO Optimization Framework (Princeton Study)

Position-Adjusted Word Count (PAWC) is the standard metric for measuring generative engine citation visibility.

- **Expert Quotations:** Direct, authoritative quotes increase PAWC visibility by **+41%**.
- **Quantitative Data:** Replacing vague text with statistics increases PAWC by **+31%**.
- **Content Fluency:** High readability yields a **+28%** improvement.
- **Inline Citations:** Referencing reputable third-party studies adds **+28%** visibility.
- **Avoid Keyword Stuffing:** Causes an **-8.0%** citation drop due to spam classification.
- **SERP Equalization:** Rank 5 organic content frequently outperforms Rank 1 in LLM recommendation rate.

2. Target Reader Personas

- **Persona A: Technical SEO Director:** Focuses on enterprise B2B SaaS crawlability, JSON-LD, JS hydration, and raw/rendered DOM diffs.
- **Persona B: Head of Growth:** Focuses on ChatGPT/Perplexity buyer recommendations, ROI attribution, and competitive share of voice.
- **Persona C: Founder / Indie Hacker:** Needs step-by-step developer guides and AI coding prompts (Claude Code/Cursor).
- **Persona D: Agency Strategist:** Requires client-ready white-label reporting dashboards and multi-brand workflows.

3. Keyword Research & Semantic Entity Matrix

- **Primary Keyword:** *AI visibility* (Entities: Generative Engine Optimization, LLM SEO, RAG Retrieval)
- **Key Technical Entities:** Knowledge Graph, Schema.org, Vector Embeddings, TrueDR, Passage Retrieval
- **Buying-Intent Prompts:** "Top AI visibility tracking platforms for B2B SaaS in 2026", "Compare Peec AI, Profound, and VerifiedDR".

4. Competitive Landscape & Tool Comparison

Platform	Target	Pricing	Methodology	Key Strengths
VerifiedDR	Founders, SEOs, Devs	Pro / Agency	Local 47-check audit	Audits 5+ bots, raw/rendered HTML diff, TrueDR, Cursor/Claude prompts
Profound	Enterprise	Custom	API prompt runs	SOC 2, governance, executive dashboards, historical archives
Peec AI	Startups, Agencies	\$95 - \$245/mo	Daily prompt runs	Clean UI, unlimited seats, AI Shopping Analytics
ZipTie.dev	SEO Teams	~\$79/mo	Real UI crawling	Simulates user UI behaviors, auto query generation
Otterly.AI	Small Business	~\$29/mo	Multi-model monitor	Low cost, quick setup, simple brand alerts
Scrunch AI	Data Analysts	\$83 - \$417+/mo	Cohort engine	Cohort breakdowns, metric customization
Hall	Brand & PR	\$199 - \$499+/mo	Continuous query	Sentiment tracking, citation drift, crawler activity

5. Technical Analysis of VerifiedDR

Combines on-page technical diagnostics (local 47-check browser audit) with multi-engine query tracking to identify indexing blockages and generate developer-ready prompts for AI workspaces.

- 1. AI Crawler Access:** Inspects robots.txt for GPTBot, OAI-SearchBot, ClaudeBot, PerplexityBot.
- 2. JavaScript Blindness:** Compares raw HTML vs. rendered DOM to prevent invisible JS content.
- 3. Structured Data:** Validates JSON-LD schema (Organization, Product, FAQPage, Article).
- 4. llms.txt Verification:** Confirms root markdown file availability.
- 5. TrueDR Score:** Cross-references Domain Rating with verified search traffic and trust signals.

6. Optimization & Technical Checklists

- [] **Include Expert Quotes & Stats:** Boosts PAWC citation visibility by +31% to +41%.
- [] **Unblock AI Crawlers:** Explicitly permit OAI-SearchBot, PerplexityBot, and ClaudeBot in robots.txt.
- [] **Host llms.txt:** Create clear markdown overview at domain root domain.com/llms.txt.
- [] **Eliminate Keyword Stuffing:** Avoid artificial repetition (-8.0% penalty).

7. Strategic Implementation Roadmap

- **Phase 1 (Days 1–14):** Audit robots.txt, fix JS blindness, deploy llms.txt, validate JSON-LD.
- **Phase 2 (Days 15–45):** Add expert quotes/stats, restructure with direct-answer openings.
- **Phase 3 (Ongoing):** Monitor neutral prompts and generate developer prompts for instant patches.
